

## FIRE LIFE SAFETY REMINDERS

Keep your facility safe and within code compliance.

### INSPECTIONS. WHAT YOU NEED TO KNOW.

Surrounding counties are starting to require all fire alarm inspections, sprinkler inspections, hood inspections, backflow inspections as well as any required repairs, to be entered into a central database. This software not only notifies the AHJ Authority having jurisdiction of the inspection, or upcoming inspections, it will also notify a customer of when they are due for inspections. This simple, web-based service is for code officials to track and drive inspection, testing and maintenance code compliance for fire protection systems, backflows and elevators. It boasts it will reduce false alarm activity, and provide safer communities through third-party inspection reporting and maintenance.

The new software being utilized works for Fire Marshall's to collect, organize and categorize the third-party inspection reports. Track all your buildings critical safety systems -- know who is compliant, who is deficient, and make more informed decisions that keep your staff, residents and visitors safe. Of course, this new process comes with fees to Classic and other life safety service partners. This cost is being passed onto the customers.

### HAZARD TESTING.

- 1 Did you know that fire extinguishers and fire hoses are required to be tested annually?
- 2 Did you know that we can service your extinguishers and fire hoses onsite?
- 3 Did you know that your hood systems must be serviced every 6 months?

### ONGOING FIRE ALARM COMMUNICATION ISSUES?

What we are seeing in the activity log at the central station is not a Comcast issue or Classic issue, but is caused by AT&T switching their network over to fiber optic/VOIP. We understand you are using Comcast, but AT&T owns all the infrastructure around the country and while Comcast is providing your service at the building, when the signals leaves the building they are handed off to AT&T for transmission to the central station. Most fire alarms are not up-to-date to work with very limited bandwidth and all the new fiber wiring being used with this fiber optic/VOIP.

### CHANGES TO YOUR PANEL.

Any construction or remodeling that occurs within your building that requires adding or deleting fire alarm or burglary devices may include adding or deleting devices to your control panel. When this occurs, we must receive an updated list of zone information to Central Station so that we properly identify codes coming from your panels.

### GOT ELEVATORS? WE MONITOR.

Does your elevator phone work? Is someone checking your elevator phone operability?

### CUSTOMER CONTACTS.

With the turnover of employees and management changes, we ask our valuable customers to update Classic immediately on all vital changes with employee contact phone number, email, accounts receivable email, etc. All updates should be sent to [tclick@classicprotectionsys.com](mailto:tclick@classicprotectionsys.com).

### PAYMENTS.

Monitoring invoices are due within 30 days of receipt. Please process promptly. Accounts over 60 days past due will be placed on a COD basis. **For email only invoicing, send request to** [ap@classicprotectionsys.com](mailto:ap@classicprotectionsys.com).
